Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action SummaryApplication No. **AK**

09/888,762

Applicant(s)

ELDAR ET AL.

Examiner

Kevin M. Burd

Art Unit

2631

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 July 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☐ Claim(s) _____ is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

1. This office action, in response to the remark filed 7/21/2004, is a non-final office action.

Response to Arguments

2. Applicant's arguments with respect to the rejections of claims 1-48 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, new grounds of rejection are made in view of Bottomley et al (US 6,801,565).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 14-27 and 37-48 are rejected under 35 U.S.C. 102(e) as being anticipated by Bottomley et al (US 6,801,565).

Regarding claims 1, 2, 14-25, 27 and 37-48, Bottomley discloses a receiver shown in figure 4 comprising a bank or plurality of correlators 414a-414l and a method of using the correlators described in column 6, lines 22-39. The received signal is cross-

Art Unit: 2631

correlated. Walsh functions are used, which are orthogonal (column 7, lines 42-45). In addition, a least mean square (LMS) algorithm is used (column 14, lines 10-35). These processes take place in elements 214, 218, 222 and 224 in figure 2. The output of the bank of correlators is feed to channel compensating 420a and 420b and impairment compensating means 450 that further shapes the output by removing errors in the signal. These elements are the "correlation shaper".

Regarding claim 26, the output of the correlation shaper is fed to downstream elements that will detect and forward or process the received signal.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bottomley et al (US 6,801,565) in view of the instant application's disclosed prior art (specifically paragraph 0004).

Regarding claim 3, Bottomley discloses the apparatus and method described in paragraph 3. Bottomley does not disclose the correlators are a matched filter receiver. However, the instant application's disclosed prior art discloses, in paragraph 0004, CDMA receivers use matched filter receivers that try to mitigate the effect of multiple signature signal interference and background noise. For this reason, it would have been

obvious for one of ordinary skill in the art at the time of the invention to use the matched filter receiver of the instant application's prior art in the bank of correlators of Bottomley.

5. Claims 4-6, 9-11, 27-30, 33 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bottomley et al (US 6,801,565) in view of Huang et al (US 6,067,292).

Regarding claims 4-6, 9-11, 28-30, 33 and 34, Bottomley discloses the apparatus and method described in paragraph 3. Bottomley does not disclose shaping the correlation by minimizing the mean square error. Huang discloses in column 20, lines 14-17, the output of the processed received signal is processed again to minimize the mean square error of the demodulated CDMA signal. This minimizing of the mean square error takes place in a "correlation shaper". It would have been obvious for one of ordinary skill in the art at the time of the invention to incorporate the teachings of Huang into the apparatus and method of Bottomley. By minimizing the mean squared error, performance of the receiver and the interference cancellation system can be improved (column 14, lines 46-54).

5. Claims 7, 8, 12, 13, 31, 32, 35 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bottomley et al (US 6,801,565) in view of Heikkila (US 2002/0122470).

Regarding claims 7, 8, 12, 13, 31, 32, 35 and 36, Bottomley discloses the apparatus and method described in paragraph 3. Bottomley does not disclose shaping

Art Unit: 2631

the correlation by performing a transformation on the output so that the covariance matrix has the property that the second row is a permutation of the first row. Heikkila discloses a receiver for demodulating the received signal (figure 8, element 46 and paragraph 0106). The output of element 46 is input to element 30. This element shapes the output of the demodulator by minimizing the Mean Square Error (paragraph 0033) that utilizes the rows of a covariance matrix as stated in the abstract. It would have been obvious for one of ordinary skill in the art at the time of the invention to incorporate the teachings of Heikkila into the apparatus and method of Bottomley. Minimizing the mean squared error of the symbols allows the data to be properly recovered in the receiver. The data will be free of errors and the receiving process will be more efficient.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin M. Burd whose telephone number is (571) 272-3008. The examiner can normally be reached on Monday - Thursday 9 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on (571) 272-3021. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2631

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
